Theo Mayer: Welcome to World War I Centennial News, the Doughboy Podcast, episode number 146. The Doughboy Podcast is about what happened a hundred years ago during and after the war that changed the world. It's not only about then but it's also about now. How World War I is still present in our daily lives in countless ways but most important, the podcast is about why and how. We will never let the awareness of World War I fall back into the mists of obscurity. This week, as the show is in between seasons, we've pulled together a potpourri of wonderful segments as we count down to Veterans Day 2019. The Doughboy Podcast is brought to you by the U.S. World War One Centennial Commission and the Doughboy Foundation. I'm Theo Mayer, your producer and host. Welcome to the show. In this week's episode, we're going to open with an announcement about Bells of Peace 2019. Then, we'll present a series of wonderful interviews with historians, including Jay Winter and the cultural impact of World War I, Dr. Frederick Dickinson, with Japan's impact on World War I, Sir Hew Strachan with a challenging overview question about the impact of the war. For Speaking WWI, we're going to chase down the surprising origin of the word tank. For World War I war tech, it's all about imaging, which is a great lead-in to our interview with Brent Burge, about Peter Jackson's paradigm shifting They Shall Not Grow Old. Be sure to listen to the segment with some exciting news about the film for the 2019 holiday season all this week on WWI Centennial News, the Doughboy Podcast. I want to open this week with some news from our sponsor, The Doughboy Foundation about Bells of Peace 2019. For those of you who are not familiar with it, in 2018, a national bell tolling called Bells of Peace was launched as a World War I remembrance on the centennial of the armistice of World War I. Literally tens of thousands of communities, churches, military veterans, civic organizations and individuals all over our nation and even internationally came together for a moment of reflection to honor the people, events, sacrifices and consequences of the war that changed the world. It's a means of showing respect and reverence to the horrific, the heroic, and the consequential, both from World War I and since. As a part of the Doughboy Foundation's commitment that these events don't fall back into obscurity, we're once again calling for a national bell tolling on the 11th hour, local, of the 11th day of the 11th month. Of course, that's on Veterans Day. The Doughboy Foundation's not alone in this. The Society of the Honor Guard for the Tomb of the Unknown Soldier is also calling for a tolling under their National Salute 2019. It's also a bell tolling initiative as we approach the 100th anniversary of the burial of an unknown American soldier who fought and died in World War I and is buried in the Tomb of the Unknown Soldier in Arlington National Cemetery. That anniversary is in 2021. Join us as we stop and take a moment to reflect, honor, and remember and reverently toll the bells 21 times five seconds apart in hope for continued peace. But what if I don't have a bell? No problem. We have an app for that. The free Bells of Peace Participation app, 2019 version is for everyone who needs a bell to toll. As the app's built-in countdown timer reaches 11:00 a.m. Local, Bells of Peace will toll from every device together 21 times in a remembrance of when the fighting ended on the Western Front in 1918. Go to ww1cc.org/bells, all lower case, to learn more. The 2019 Bells of Peace Participation app features a countdown timer, selection from seven different bell sounds. Bells that'll toll together across devices. There's a manual mode, an easy way to share with your friends, and versions for iOS and Android mobile devices. If you're going to toll the bells on 11/11, please share your intent and your stories of tolling using the hashtags #TolltheBells and #CountdowntoVeteransDay. Learn more by following the link of the podcast notes or going to ww1cc.org/bells, all lower case. For this week's WW1 THEN section, we thought it might be very interesting to focus on academic historians and their various perceptions on key aspects of World War I. With that as a setup, let's dive into WW1 THEN, with an expanded series from our historian's corner.

Male: [inaudible].

Theo Mayer: First up, Dr. Jay Winter is from Yale University, and the Charles J. Stille Professor of History Emeritus. Dr. Winter has a great insight into the cultural impact of our 20th century wars, and is the author of such books as The Great War and the Shaping of the 20th Century, Sites of Memory, Sites of Mourning: The Great War in European Cultural History. He's also the co-writer and chief historian for the 1996 PBS series The Great War and the Shaping of the 20th Century, which was awarded two Emmys, as well as the Alfred DuPont Journalism award, the George Foster Peabody Award, and more. Jay, it's a pleasure to have you on the show.

Dr. Jay Winter: It's good to be with you.
Theo Mayer: Jay, you've been focusing on World War I since before the Centennial. How did you come to focus on this time period?

[0:06:21]
Dr. Jay Winter: I began studying the First World War in 1965, when I was an undergraduate at Columbia University. The First World War struck me as Europe's Vietnam, so it was the contemporary echoes of the war in Vietnam that affected my choice of subject, and indeed is part of the explanation for the vast expansion of First World War studies from the 1970s on.

[0:06:45]
Theo Mayer: Well now, we've talked with a number of historians and others about the many changes that this period brought around. In fact, we've been referring to it as the war that changed the world. Would you agree with that?

[0:06:56]
Dr. Jay Winter: Absolutely. The technology of information and images was revolutionized. One of the leading revolutionaries was the Kodak Company, who put in the hands of ordinary soldiers, the Kodak Vest Pocket camera, that made it impossible for armies to enforce their regulations that soldiers shouldn't have images of war. They should simply fight, and let the propaganda agents take care of that. In some ways, what the First World War did was to open up ordinary soldiers' vision of what war is, including American soldiers, of course, and prepare the ground for the fact that you can't control images. It's the prehistory of Abu Ghraib in Iraq.

[0:07:37]
Theo Mayer: Fascinating. Jay, in some of your writings, you're specifically talking about World War I, and how it changed the way we mourn our dead. Could you elaborate on that?

[0:07:47]
Dr. Jay Winter: The First World War produced 10 million dead men, either killed in combat or died in disease. Of those, five million have no known graves. It's as true for the American army as it is for others. War has always been a killing machine, but what 1914-18 did, because of artillery, was to turn it into a vanishing act. The issue of missing soldiers, soldiers who died but no one has a trace of them, becomes universal in the First World War. It was the birth of the war of the disappeared. It's also the moment when a number of different countries all attempted to represent this revolution through creating tombs for unknown warriors. In other words, not people who disappear, but a body that doesn't have a name. It's those that we honor, as in Arlington Cemetery.

[0:08:32]
Theo Mayer: Well, you're certainly right about that. In the thousands of locales where World War I memorials are around the country, the names of the lost sort of form the central theme for the communities and for the memorials. Is that also true in Europe?

[0:08:44]
Dr. Jay Winter: Very much so. The names are all that really mattered. This is a phrase that the British poet Rudyard Kipling, who lost his son, too, who literally vanished during the Battle of Loos and his body has never been found. He put that in all of the Commonwealth, initially Imperial, but now Commonwealth war graves cemeteries. Their names shall liveth for evermore, because there's nothing left. Artillery killed 80% of the men who died in the First World War. It was mechanized, assembly line, machine-run killing. Four years of war. The biblical message that we all return to dust was relived with a savage irony attached to it. The notion of honoring the dead meant honoring an individual who once walked by your side, and who now has simply vanished from the face of the Earth.

[0:09:26]
Theo Mayer: In addition to all you've done, you also were asked to consult on the design for the Historial de la Grande Guerre, a major World War I memorial with multiple locations in France, a really unique design. What were some of the thoughts and considerations during that museum's design process?

[0:09:42]
Dr. Jay Winter: Well, it was quite something in 1985 to be asked to design a museum. We historians are used to thinking in two dimensions. To actually think in three dimensions about what a museum of the First World War should look like. And what I ultimately came up with was the idea that 20th century warfare needs to have a horizontal axis in order to do justice to the subject. The reason is soldiers dug trenches to stay alive, but the second reason is this. The language of glory, the language of heroism, the 19th century language about war is vertical. 20th century war and the language we use to represent it is much more horizontal. Think of Maya Lin's Vietnam Veterans Memorial. That particular design is entirely horizontal, and you can see the advantage. Horizontality is the language of mourning.
Verticality is the language of hope and celebration. In Europe, absolutely you do not celebrate the First World War. You commemorate it. A horizontal design can express commemorating the war much better than a vertical design.

[0:10:42]
Theo Mayer: Well, as you know, the U.S. World War One Centennial Commission's building a World War I memorial in Washington, D.C. It's something that's currently missing in the Capital. I know you've been following the project because you've commented on it, but what do you think of the plans for the National World War I Memorial?

[0:10:56]
Dr. Jay Winter: I think they're very interesting. Indeed, there are a number of reasons why I think it's absolutely consistent with the change in representation that has taken place in museums all over the world. First is, it's a wall, and what American soldiers did was fill the holes on the Allied side, and also paid for them. To have a wall, that's what's due to represent the First World War. Secondly, a wall showing men fighting for each other. I think the third advantage of having a wall that shows men in combat is to make it clear that the First World War was the first of 20th century wars that didn't do what they were supposed to do. It was the war that made the next one almost certain. I hope funding becomes fully available. The design in question I fully support.

[0:11:40]
Theo Mayer: Dr. Jay Winter is the Charles J. Stille Professor of History Emeritus at Yale University, and the author of numerous books on the cultural impact of World War I on the 20th century. Learn more by following the links in the podcast notes. Our next historian offers us a fresh view of a nation that fought the Central Powers on the side of the allied nations and who makes an interesting case that this often ignored aspect of World War I could have been a major game changer but not one that's much focused on. Now, those who've never been exposed to what happened in the Far East during World War I are often surprised by the fact that Japan declared war almost as soon as hostilities broke out in 1914, years before America entered the fray, and many of those same people are also surprised to learn that Japan fought on the side of the Allies. And those who know just a little about Japan in World War I, tend to hold some precepts about Japan, and Japan in World War I, including the accepted Western concept that Japan was an isolated nation, and stalked away from the Versailles Treaty, having been seriously insulted by the non-acceptance of their proposal for racial equality for the League Of Nations. Now, I'm one of those people, so it was really great to have some of my precepts realigned by our next guest, Dr. Frederick Dickinson, Professor of Japanese History at the University of Pennsylvania, Co-Director of the Lauder Institute of Management and International Studies, and the Deputy Director for the Penn Forum on Japan. In fact, Dr. Dickinson didn't just study Japan, he was born in Tokyo, and raised in Kanazawa and Kyoto. He's written a series of books including War and National Reinvention: Japan in the Great War, 1914-1919. Dr. Dickinson, thank you for joining us.

[0:13:34]
Dr. Frederick: Sure. Thanks, Theo. Thanks for having me. Delighted to talk about Japan. Delighted to have an audience for Japan.

[0:13:39]
Theo Mayer: Okay, let's start with the isolation issue.

[0:13:42]
Dr. Frederick: I would say number one, that Japan was never isolated, but we have this impression because Japan was very adept at essentially controlling its own foreign policy up through the Early Modern Period. Had a little bit of issue in the mid-19th century, obviously, when Commodore Perry came along, and it turned out that the Americans were going to sort of decide the terms of trade and negotiation. But the Japanese are first defeating the Chinese in war in 1895. They're also a very important part of the international coalition to suppress the Boxer Rebellion in China in 1900. Later 19th century, it's the Age of Empire, so there are a few things you have to do in order to be taken seriously on the international stage. You have to create a modern state, and you have to create a modern empire. In order to do both of those things, you have to create a modern navy and a modern army. Essentially, Japan is doing that. The Japanese, already by 1885, are looking to Korea as the principle target of their potential empire building enterprise. That very much begins with the Sino-Japanese War and just continues. So, Japan is very much on the radar screen. This is the main reason for the Anglo-Japanese alliance of 1902. The British recognize, number one, that Russia is a problem, and they recognize, number two, that the Japanese are the ones to help deal with the Russians.

[0:15:05]
Theo Mayer: World War I breaks out, and within months, Japan invades the Qingdao region of China, presumably because it was held by Germans at the time. Is that true?

[0:15:14]
Dr. Frederick: Definitely, but even more important than the within months idea, is that the Japanese are declaring war on Germany August 23rd of 1914. This is quite remarkable. I mean obviously it's after the British, after the French, but it's before the Americans, it's before the Italians, it's before the Ottoman Empire gets involved in this war. They're very much out there, at the beginning of the war. And, yes, you have to ask yourself, "Well, what's going on?" Essentially, it's the Anglo-Japanese alliance. In particular, it has to do with the one man who was basically in charge, in August of 1914. He was the one who made almost single-handedly the decision to go to war against Germany. That was Katō Takaaki. He was a Foreign Minister at the time.

Theo Mayer: So what role did Japan play during the War?

Dr. Frederick: Well, it's an interesting question, an important one, and one that you would probably be surprised to learn, but I would say, to put it in a nutshell, the Japanese belligerence against the Central Powers was a deciding factor in the victory of the Allied Powers. The Germans essentially are knocked out of the war in Asia by November of 1914. And, I would simply say that had the Japanese decided instead of declaring war on Germany, to declare war on Britain and its Allies, we would be living in a very different world right now, and that was not necessarily out of the realm of possibility.

Theo Mayer: Okay, so moving forward, Japan was allied with the Anglo-Franco Alliance during World War I. What happened between World War I and World War II that caused Japan to align themselves against the Allies 25 years later?

Dr. Frederick: This changes from the Manchurian Incident onward. The Manchurian Incident in September of 1931. After becoming a pivotal player at the Paris Peace Conference, a pivotal player at the Washington Conference, at the Geneva Conference, and naval arms reductions at the London Conference in 1930, a very important signatory to the Kellogg-Briand Pact of 1928. After that, clearly something different is going on. Essentially, I would say it's a problem of domestic politics in Japan. Political parties are sort of a new phenomenon in Japan until the First World War, essentially. The oligarchs had been in charge, the bureaucratic decision-makers had been in charge. So, the 1920s is a new era of political party management, and there are some within Japan that do not benefit politically by this arrangement, and they try as hard as they can throughout the 1920s to put Japan on a different path. They finally find a solution, a formula, and that is just to start shooting at home and abroad. So, these folks are doing that in early 1930s, and this obviously ultimately changes Japan's trajectory, puts it on a path toward alliance with Germany and Italy, rather than with Britain and the United States.
Theo Mayer: Dr. Dickinson, thank you so much for providing our listeners with this great overview of a story that many people I've spoken with are actually surprised at, and really a story that's pretty much untold. Thank you for coming in.

[0:19:36]
Dr. Frederick: My pleasure. Thanks for having me, Theo.

[0:19:38]
Theo Mayer: Dr. Frederick Dickinson is Professor of Japanese History at the University of Pennsylvania. You can learn more about Japan in World War I by following the links in the podcast notes. Our final historian guest today is Sir Hew Strachan. Big questions addressed in a small time frame are perhaps the most difficult combination possible. So, I thought Sir Hew was an ideal expert to provide us with a wide angle lens view for addressing the giant question. What was the impact of World War I on the world, or at least, what are the top-line items when you boil it all down? Sir Hew is one of the most respected World War I historians anywhere. He's the Professor of International Relations at the University of St Andrews, and Emeritus Fellow of All Souls College, University of Oxford. Sir Hew, it's wonderful to have you back on the podcast. Thank you for taking the time.

[0:20:34]
Sir Hew S.: It's a great pleasure, Theo. I'm delighted to be back on.

[0:20:38]
Theo Mayer: We've been calling it the war that changed the world. Now, in your opinion, as one of the great subject matter experts on World War I, what would you pick as the top three changes that were brought about by the conflict?

[0:20:51]
Sir Hew S.: I suppose the first and most obvious thing, if you look at it from the perspective of 1918-1919, is that four of the major empires in the world have collapsed, but the results across Central and Eastern Europe, and into Asia, and into Central Asia, and down to the Middle East, is massive. Here is essentially a situation where there is a vacuum in terms of governance, in terms of which the successor states will be. All that is going on, and possession is nine-tenths of the law. So, while the peacemakers are meeting in Paris these competing entities are fighting each other, and force of arms is deciding a great deal. So that's perhaps the long answer, but I think that's one of the most dramatic changes. The second would be the entry of the United States into the world order, its role in shaping the international order, its positioning of itself as a global power. So that would be my second point. And, I think the third is that what emerges out of both those things is that our understanding of how states should be put together itself changes. So there's a consideration of power politics, and in some ways Wilson pays no attention to those principles of power politics. He simply says, or he gives vent to the idea of national self-determination. And that remains even today, something we respect as a principle, but of course has been a tremendous source of conflict in the 20th century world, not just in the short term, in the run up to the Second World War, but also still today.

[0:22:23]
Theo Mayer: That's fascinating. So, your biggest take on all of this is that the transformation from this was political?

[0:22:31]
Sir Hew S.: Yes, I think I would. I mean, if the implication of your question is is it economic, is it social? Well, of course it's those things as well.

[0:22:38]
Theo Mayer: Sure, technological, social.

[0:22:41]
Sir Hew S.: There is a lot, and I think I would put political, economic and social ahead of technological, because although the Technologies of war are put on a new footing by the First World War, you can see the antecedents of much of that with industrialization between 1850 and 1914. And perhaps most basic would be the notion that they are societies with mass popular press, with a very high level of literacy, with a degree of economic security, and with a genuine sense of progress defined in all sorts of ways, which makes for the war being a sort of surprise, in that you'd expect Europe to have more sense than to go to war, and also makes this war so radically different so quickly it becomes a major war involving whole societies from 1914 itself. And, the collapse of the empires at the end of the war is something which all have realized is a possible implication of this war from 1914 itself. Change is there, but change now is going to be in a much more radical form, and a revolutionary form.
Theo Mayer: Now, there are some who argue that World War II is simply a continuation of World War I. What are your thoughts on that subject?

Sir Hew S.: I've never bought that argument. I don't think I've ever bought it. I certainly don't buy it now. The aspiration that this is a war to end all wars, which is an aspiration expressed by socialists, particularly in France in 1914, and one of course reflected by Woodrow Wilson after the US entry, that's one genuinely felt across Europe in 1919. But, I think if you look at the situation across the world from the perspective of 1924, let's say, with the Treaty of Lausanne, and with people returning from the war, I think there must then have been a sense of optimism, and that whatever has happened in relation to the war and the experience of the war, can begin to be put behind societies, as they look forward. So, I don't think you can jump from 1919 to 1939 or 1941. There's too much in between.

Theo Mayer: You've written a lot of books and a lot of articles about World War I, and you've done a lot of research. What are some of the key issues about this global catharsis that remained unknown, unknowable, and unresolved?

Sir Hew S.: There are areas where I think research will still be done, which will leave us much better informed. In the Russian case, Russia's been neglected because at least up until the collapse of the Soviet Union, Russian history began in 1917. So, the First World War was always looked at as the precursor to the revolution. And the same point in a slightly different way applies to the Ottoman Empire, but it has remained a story too dominated in some ways by the fact that the easily accessible source material is in languages other than Turkish. In terms of what will remain unknown, one is on hunger in the First World War, but what I think we will always struggle to identify is how much hunger across Europe in the First World War was the direct product of the war effort, and how far hunger was a product of maladministration, of the mobilization of peasant societies, with the withdrawal of animals from agriculture for use in the armed forces. In other words, how much is hunger an indirect consequence of the war rather than a direct consequence of military action? And this seems to be crucially important because one of the things that I thought would happen as a result of this centenary but hasn't is that we haven't the faintest idea what the total number of dead as a result of this war is. Most economic historians would say demographically the impact of the war is pretty short term, and most societies have recovered fairly quickly in the 1920s. But, it would still, to my mind, be the great project actually to answer that question. So, there's a lot to be done.

Theo Mayer: Thank you. Nice chatting with you.

Sir Hew S.: Thank you, Theo.

Theo Mayer: Sir Hew Strachan is Professor of International Relations at the University of St Andrews, and Emeritus Fellow of All Souls College, University of Oxford, and an author of many books and papers. Learn more about him and his work at the link in the podcast notes. That's it for a hundred years ago. Let's jump back into the present with WWI Centennial News now.

Male: [inaudible].

Theo Mayer: This part of the podcast focuses on now and how World War I is being remembered, discussed, taught and learned and commemorated today. For Speaking WWI, where we explores words and phrases with their origins in World War I. This week, another one of those words you think of casually but don't automatically associate with World War I, one of the most iconic new weapon technologies of World War I is the tank. “They rode into World War I on horses and they rode out on tanks” is a popular phrase that describes the times. This is the grand evolution of the armored car, and every side in the conflict tried to create an effective machine but the British beat everyone to the punch with their landship, premiering the Mark I in September of 1916. Until then, this was a new secret weapon. The machines were called tanks in a ruse describing the big metal things as water carriers, supposedly for use in the Mesopotamian front. So in conversation, the engineers referred to them as water tanks or simply tanks. Interestingly, the British Landship Committee even decided to change its name for the same secretive reason, renaming itself the Tank Supply Committee. By the time the machines rolled over the fields of Cambrai in the winter of 1917, not only did the tanks get stuck but so did the name. No one went for the name landships. They were simply known then and are still today as tanks, this week's word for Speaking WWI. See the podcast notes to learn more. This week in WWI War Tech, the subject is photography and imaging in World War I. Photography and the war had major influences on each
other. In 1914, as the Germans streamed through Belgium towards France, pilots had seen the columns of invaders from the air. Now, they made estimations on the number of invaders, but the commanders just didn't believe that you could make such an accurate assessment from up in the sky. But soon after, the planes were outfitted with cameras and aerial reconnaissance grew into a major part of combat and strategy. The combination of these two relatively new technologies, the airplane and the camera, provided field commanders with a comprehensive map of the enemy positions and movements, as field darkroom technicians started to stitch together dozens of images into comprehensive area maps. Now, there was a pattern here. Reconnaissance overflights preceded artillery bombardments, and artillery bombardments preceded ground offensives, a pattern that the soldiers began to recognize. And if you think about it, even though fighter plane aces were the noted, notorious, wonderful knights of the sky as they engaging in dogfights, much of the time, their actual job was protecting the recon planes. And in fact, those pilots and the specialized units that made sense of their photos probably had a greater impact on the war. On the ground, official war photographs and films were being made by all sides. The U.S. Signal Corps motion and still picture cameramen were assigned to every division and outfit of the American military, as well as the Red Cross and the Salvation Army. These cameramen produced nearly 600,000 feet of film abroad. In the United States, the Signal Corps shot another 277,000 feet of film. The US Signal Corps documented an American war in an unprecedented fashion, preserving countless motion and still images for posterity, a huge boon to the Centennial as the Library of Congress has added troves of great digitized images and films to the publicly-available resource. But the Signal Corps cameramen weren't the only ones on the ground with cameras. World War I started just after the introduction of a world-changing new camera, the Vest Pocket Kodak, the VPK. By 1914, war photography had actually been around for over a half a century. However, due to the tech limitations of the camera gear, pictures of war were mostly staged. According to military historian Jon Cooksey, 19th century war photographers were hampered by wet clay technology, with unwieldy cameras that needed long exposure times, not exactly ideal for capturing the chaos of war. But the 1912 Kodak Vest Pocket camera was small enough to carry, and anyone could take a picture. It quickly exploded in popularity, and reached the front in 1914 with the first wave of British soldiers. Commanders were far from thrilled about this. They wanted to control the world vision of the war. After friendly images of Brits and Germans surfaced following the Christmas Truce of 1914, the British government banned portable cameras. Of course, it didn't work. In contrast, the German authorities were fairly tolerant about personal photography in their ranks. In the US, the Kodak Company marketed the VPK specifically to soldiers, who brought them to France in droves. According to a Kodak advertising poster, the camera helped the soldier create, "History from their viewpoint." Now, this isn't just effective marketing, but a poignant statement regarding the significance of personal photography in wartime. So, thanks to this new piece of photographic technology, soldiers, nurses, and civilians alike produced a massive collection of personal images, and have managed to share their experience with us about the war that changed the world. And that's the perfect lead-in to our closing segment about how legendary director Peter Jackson has taken historic World War I footage from UK's Imperial War College and has brought it to life in a compelling, memorable, and amazing way in his documentary called They Shall Not Grow Old. It premiered around this time last year with a limited release in theaters. Today, you can see it on HBO, get it on Amazon, rent it from Amazon Video or Apple TV and various other options, but keep an eye out because we just picked up a rumor that it may come back into theatrical release this holiday season and seeing this documentary at scale in 3D has literally been one of the most memorable lifetime theatrical film experiences I've ever had. Peter Jackson, one of the most innovative film directors working today had an idea. Using his craft and his genius, he wanted to create a time machine to transport those young men and boys from what we think of as a choppy, crude, black and white, silent world from a hundred years ago into the present. Of course, the world really wasn't black and white and silent. It was as three dimensional and vibrant as your world is right now. So Peter Jackson led a team of artists, technologists, creators, and they took the hundred-year-old, clunky, silent film footage and brought it to life.

[0:34:43]
**Male:** I was 16 years old and my father allowed me to go. I was just turned 17 at that time. I was 16. I was 15 years. When they came to us, they were frightened children and had to be made into soldiers. Well, boys. Here it comes. We're in the pictures. I gave every part of my youth to do a job.

[0:35:12]
**Theo Mayer:** I had a special treat when the project's supervising sound editor, Brent Burge and I spoke. Now, he's in New Zealand and I was in LA. Brent's been working with director Peter Jackson on a lot of his projects including all the Lord of the Ring movies. He had some great insight into the director's vision of this special film. Here's our conversation.

[0:35:34]
**Brent Burge:** I've had a long history with Peter, going back to his first film in fact, back in 1987, Bad Taste. Peter originally had a discussion with us back in 2015 about the show. He kind of got us in to come into the cutting room and have a bit of a chat, because it was a new show he was looking at. It was an interesting discussion he had about the show at that point, actually, because the interesting thing that I remember him talking about as he showed us the material was just how everybody looked really happy when they were kind of going to war. The propaganda machine
was kind of fully on, the cameras were out with all the men running, heading off to the First World War. Then, there was just a stark contrast to the way they returned. It was like they were no longer aware of the camera. They didn't care about the camera at that point. It was much more grim in a way. It was a really interesting contrast that he pointed out at that point, when he was obviously reviewing the footage. But of course we thought we were going to start straight away on the show at that point, but that actually literally ended up taking another kind of two or three years for him to push his way through it.

**Theo Mayer:** You were starting with essentially a blank page as a sound editor for the project. You literally had to invent the entire audioscape for the scenes. It was all silent footage, right?

**Brent Burge:** There was absolutely nothing on the page in terms of sound for us at all. We did have this library from the UK of some original material, original tapes and so forth, but in terms of this footage, no. Absolutely nothing.

**Theo Mayer:** One of the things I think is really interesting is that you had to reconstruct what everybody was saying. How did that work?

**Brent Burge:** Peter had already identified the idea of how detailed he wanted this to be, and it was really about authenticity and about the whole going back into sounds, which would have been sounds from the time, and that included the dialogue. There was a number of things about the dialogue what he really had identified, even at that point, of wanting to know what they were saying, so he really was very serious, even back in 2015 to get lip readers in to check out what was being said. Not only did we have the shots that Peter had selected that had to be fully replaced with sound, Foley, dialogue, crowds, the whole thing. Then, one step back from that was pretty much the backgrounds of the whole show. Then, also you have a voiceover. Hundreds of hours of the stories that the old boys spoke about were distilled down into this project, which was originally only going run 30 minutes, but obviously Peter had in the back of his mind, “No, okay. Yeah, I'm just going to give you boys this footage, but we're just going to keep working your way in the dark here because I've got so much and think I can actually make a feature out of this.” And, no, we didn't know that for a long time. Peter would then hand over the material again, and the Foley would be okay, but then at the same time, Peter was also re-cutting the voiceover. So we had a tracking issue between having to track the picture changes that Peter made, and as well as that, beginning to track all the voiceover changes that Peter made, because the interviews were of completely varying quality and also had a noise flaw, which was substantial. A lot of cleanup happened on the actual interviews themselves, which we didn't want to lose every time Peter handed the material back over to us. The picture and the voiceover were quite separate in the way Peter wanted to portray what was being talked about.

**Theo Mayer:** What's interesting is in a lot of standard dialogue replacement, you have one or two people, but you were dealing with a lot of crowds.

**Brent Burge:** Peter is a bit of an avid collector. He's got a passion for the First World War, which you can hear in the show. So, he had some artillery guns himself. We had an opportunity to record all the shells being loaded, he's got empty shells. We had to record a lot of the Foley background, the guns. As well as that, he has some contact from
the army as well here, so occasionally they'll just invite Peter to come up to Uluru, and that they're going to do a
particular exercise that we might be interested in recording, which would be things like shooting off artillery shells in
the middle of the desert. We have mountains in the middle of New Zealand where the road goes up onto the plateau,
and the army is based around these couple of mountains, and they do a lot of exercises there, and we had the
opportunity to go and record it. That's where you get to really sense the way a gun sounds. When we arrived, the
army guy say, "Okay, let's go out. We'll go out and scout the terrain about where we're going to be doing this. The
guns will be shooting from here, and they will be shooting over those foothills over there, about nine kilometers away
to a blast site on the other side. And just by the way, we're aiming for a rock." It took us 40 minutes to drive to the
blast site where these shells were going to land. So we had about four people recording sound for it. Two people at
the blast site, which included a bunker. The army person that was in charge of the operation was managing it from
the blast site, so he could give them instructions about how far to adjust their registration of the gun. Then that was
relayed to the gun sites where me and my co Justin Webster again were positioned. We just laid out a bunch of
microphones. They started shooting before we had finished running the microphones, mind you. So, I think I had
something in my pants at that point, because I was literally just down in front of the guns trying to set up some mics.
They started, without warning. They just started firing them off. Obviously, they'd had no instruction to kind of start
firing. So it was one of the most adrenaline-filled days, but we still managed to get some great sounds. The guns
sounded fantastic.

[0:42:30]
Theo Mayer: I'm incredibly excited by what you all and Peter have done. When you go back and you think about this
project in 5 years, in 10 years, what's the one thing you're going to remember the most?

[0:42:43]
Brent Burge: I think the thing I'm going to remember the most is the absolute vision that Peter had of how he was
going to put this project together. It was such a personal project for him. I just think you can see Peter all the way
through it. He knew exactly how it was going to work. It's all about what Peter put on the page for us to respond to,
and we responded to it, and I think audiences are responding to it as well, because it is such a personal thing for him
I think, and passionate thing for him.

[0:43:12]
Theo Mayer: I think that the methods that you are developing here are going to be used for all sorts of things. The
only thing I can say is, "Thank you."

[0:43:20]
Brent Burge: We really do appreciate it down here. It seems like one of a kind, that's for sure. That was the thing
back in 2015 that Peter said. He said, "I'm getting you guys to have a look at this, because I'm going to put something
together for us. It's going to be colorized, it's going to be 3D, and it's going to be in IMAX because I don't want people
to feel they can just watch it on the History Channel. I really want people to get out of their houses and come and see
it." That's an inspirational kind of thing that Pete often comes up, about just taking things out of the ordinary, if you
like, and just making them extraordinary for a person to watch.

[0:43:53]
Theo Mayer: Brent Burge is the Supervising Sound Editor for the Peter Jackson groundbreaking World War I
documentary They Shall Not Grow Old. We have links for you in the podcast notes and keep an eye out for an
upcoming announcement about new theatrical and 3D showings during the 2019 holiday seasons. Tickets are the
best gift I can think of for anyone who's interested in World War I, and if you're listening to this podcast, you probably
are. We have links for you in the podcast notes. And that wraps up episode number 146. We're pre-segments from
the award-winning WW1 Centennial News, the Doughboy Podcast. We want to thank all of our contributors, talented
crew and supporters who made today's episode possible including historian Jay Winter, historian Dr. Frederick
Dickinson, historian Sir Hew Strachan, Peter Jackson film sound supervisor Brent Burge. Many thanks to Katherine
Akey, World War I photography specialist and line producer for the podcast, Mac Nelsen and Tim Crowe, our
interview editing team. To J.L. Michaud for his research and Rachel Hurt, our fall intern. I'm Theo Mayer, your
producer and host. The U.S. World War I Centennial Commission was authorized by Congress in early 2013 to
honor, commemorate and educate the nation about World War I on the occasion of the centennial of the war. For
over a half a decade, the commission, commissioners, staff, and our many associates and supporters have labored
to inspire a national conversation and awareness about World War I. We've brought the lessons of a hundred years
ago to today's educators, their classrooms, and to the public. We've helped to restore World War I memorials in
communities of all sizes across the nation. Now, as the Commission's charter to honor, educated, and commemorate
the centennial of World War I has been successfully accomplished, the full focus of the commission is turning to its
capstone mission, to build the National World War I Memorial in Washington, D.C. We want to thanks the
commission's founding sponsor, the Pritzker Military Museum & Library, as well as the major contribution of the Starr
Foundation. Thanks to our podcast sponsors, the U.S. World War One Centennial Commission and the Doughboy
Foundation. The podcast and a full transcript of the show can be found on our website at ww1cc.org/cn, all lower case. You'll find World War I Centennial News, the Doughboy Podcast in all the places that you get your podcasts, including iTunes, Google Play, TuneIn, Spotify, iHeartRadio, Radio On Demand, even YouTube, asking Siri or your smart speaker by saying, "Play WWI Centennial News podcast." The Commission's Twitter and Instagram handles are both @ww1cc, and we're on Facebook at WW1 Centennial. To donate to the memorial, please go to ww1cc.org/donate and help keep the story alive for generations to come. (singing – Closing Music) Thank you for listening. So long.
